See also[edit]Look up hypercarnivore in Wiktionary, the free dictionary. [5][6][7]'Feeding Frenzy' is the thirty-third episode of American Dragon: Jake Long.. In Feeding Frenzy 2, however, you can use a shrink mushroom and you get to be a shark at one point, who can gobble them up at his highest size.. As an example of related species with differing diets, even though they diverged only 150,000 years ago,[4] the polar bear is the most highly carnivorous bear (more than 90% of its diet is meat) while the grizzly bear is one of the least carnivorous in many locales, with less than 10% of its diet being meat.. While the evolution of large size and carnivory may be favored at the individual level, it can lead to a macroevolutionary decline, wherein such extreme dietary specialization results in reduced population densities and a greater vulnerability for extinction. Many prehistoric mammals of the clade Carnivoramorpha (Carnivora and Miacoidea without Creodonta), along with the early order Creodonta, and some mammals of the even earlier order Cimolesta, were hypercarnivores.. [3] As a result of these opposing forces, the fossil record of carnivores is dominated by successive clades of hypercarnivores that diversify and decline, only to be replaced by new hypercarnivorous clades.. The earliest carnivorous mammal is considered to be Cimolestes, which existed during the Late Cretaceous and early Paleogene periods in North America about 66 million years ago.. A hypercarnivore is an animal which has a diet that is more than 70% meat, with the difference consisting of non-animal foods such as fungi, fruits or other plant material.. [2] Hypercarnivores per definition need not be apex predators For example, salmon are exclusively carnivorous, yet they are prey at all stages of life for a variety of organisms..
